B. Notification and Posting for Emergencies	16
C. Record Keeping of Pesticide Applications	16
D. Annual Report of Pesticide Applications	17
VIII. APPROVED LIST OF LOW-IMPACT PESTICIDES	17

I. INTRODUCTION

Structural and landscape pests can pose significant problems in schools. Pests such as mice and cockroaches can trigger asthma. Mice and rats are vectors of disease. Many children are allergic to yellow jacket stings. The pesticides used to remediate these and other pests can also pose health risks to people, animals, and the environment. These same pesticides may pose special health risks to children due in large part to their still-developing organ systems. Because the health and safety of students and staff is our first priority – and a prerequisite to learning – it is the policy of Silver Falls School District to approach pest management with the least possible risk to students and staff. In addition, Senate Bill 637 (incorporated into ORS Chapter 634 upon finalization in 2009) requires all school districts to implement integrated pest management in their schools. For this reason, the **Silver Falls School District Board of Directors** has adopted this integrated pest management plan for use on the campuses of our district.

II. WHAT IS INTEGRATED PEST MANAGEMENT?

Integrated Pest Management, also known as IPM, is a process for achieving long-term, environmentally sound pest suppression through a wide variety of tactics. Control strategies in an IPM program include structural and procedural improvements to reduce the food, water, shelter, and access used by pests. Since IPM focuses on remediation of the fundamental reasons why pests are here, pesticides are rarely used and only when necessary.

IPM Basics

Education and Communication: The foundation for an effective IPM program is education and communication. We need to know what conditions can cause pest problems, why and how to monitor for pests, proper identification, pest behavior and biology before we can begin to manage pests effectively. Communication about pest issues is essential. A protocol for reporting pests or pest-conducive conditions and a record of what action was taken is the most important part of an effective IPM program.

Cultural & Sanitation: Knowing how human behavior encourages pests helps you prevent them from becoming a problem. Small changes in cultural or sanitation practices can have significant effects on reducing pest populations. Cleaning under kitchen serving counters, reducing clutter in classrooms, putting dumpsters further from kitchen door/loading dock, proper irrigation scheduling, and over-seeding of turf areas are all examples of cultural and sanitation practices that can be employed to reduce pests.

Physical & Mechanical: Rodent traps, sticky monitoring traps for insects, door sweeps on external doors, sealing holes under sinks, proper drainage and mulching of landscapes, and keeping vegetation at least 24 inches from buildings are all examples of physical and mechanical control.

Pesticides: IPM focuses on remediation of the fundamental reasons why pests are here; pesticides should be rarely used and only when necessary.

IPM Basics

III. WHAT IS AN INTEGRATED PEST MANAGEMENT PLAN?

ORS 634.700 defines an IPM plan as a proactive strategy that:

(A) Focuses on the long-term prevention or suppression of pest problems through economically sound measures that:

- a) Protect the health and safety of students, staff and faculty;
- b) Protect the integrity of campus buildings and grounds;
- c) Maintain a productive learning environment; and
- d) Protect local ecosystem health;

(B) Focuses on the prevention of pest problems by working to reduce or eliminate conditions of property construction, operation and maintenance that promote or allow for the establishment, feeding, breeding and proliferation of pest populations or other conditions that are conducive to pests or that create harborage for pests.

(C) Incorporates the use of sanitation, structural remediation or habitat manipulation or of mechanical, biological and chemical pest control measures that present a reduced risk or have a low impact and, for the purpose of mitigating a declared pest emergency, the application of pesticides that are not low-impact pesticides.

(D) Includes regular monitoring and inspections to detect pests, pest damage and unsanctioned pesticide usage.

(E) Evaluates the need for pest control by identifying acceptable pest population density levels.

(F) Monitors and evaluates the effectiveness of pest control measures.

(G) Excludes the application of pesticides on a routine schedule for purely preventive

purposes, other than applications of pesticides designed to attract or be consumed by pests. ORS 634.700 allows for the routine application of pesticides designed to be consumed by pests in order to avoid a proliferation of pests and/or unnecessary applications of pesticides. We will not set out any ant or cockroach baits until first:

- 1) Informing staff in the area where the pests are that sanitation and exclusion are the primary means to control the pest.
- 2) Establishing an acceptable pest population density.
- 3) Cleaning up any food debris in the area.
- 4) Sealing up any cracks or crevices where we know the pests are coming from.
- 5) Setting out sticky insect monitoring traps in the area using the sticky insect monitoring trap protocol.

(H) Excludes the application of pesticides for purely aesthetic purposes.

(I) Includes all staff education about sanitation, monitoring and inspection and about pest control measures.

(J) Gives preference to the use of nonchemical pest control measures.

(K) Allows the use of low-impact pesticides if nonchemical pest control measures are ineffective.

(L) Also allows the application of a pesticide that is not a low-impact pesticide only to mitigate a declared pest emergency or if the application is by, or at the direction or order of, a public health official.

The above definition is the basis for Silver Falls School District's IPM plan. This plan meets or exceeds all requirements of IPM Laws as listed in ORS 634.700 – 634.750.

IV. SCHOOL DISTRICT IPM PLAN COORDINATOR

The Silver Falls School District Board of Directors designates The Director of Maintenance and Facilities as the IPM Plan Coordinator. The Coordinator is the key to successful IPM implementation in Silver Falls School District, and is given the authority for overall implementation and evaluation of this plan. The Coordinator is responsible for:

A. Attending not less than six hours of IPM training annually.

The training will include a general review of IPM principles and the requirements of ORS 634.700 – 634.750. It will also include hands-on training on updated exclusion practices, monitoring & inspection techniques, and management strategies for common pests.

B. Conducting outreach to the school community (custodians, maintenance, construction, grounds, faculty, and kitchen staff) about the school's IPM plan;
The IPM Coordinator (or designee) will ensure that all staff receives training as outlined in Section V below.

C. Overseeing pest prevention efforts;

The Coordinator will work with administration, custodial/maintenance, teachers and staff to reduce clutter and food in the classrooms, and seal up pest entry points.

D. Assuring that the decision-making process for implementing IPM in the district (section VI) is followed.

The Coordinator will continually assess and improve the pest monitoring/reporting/action protocol.

E. Assuring that all notification, posting, and record-keeping requirements in section VII are met when the decision to make a pesticide application is made.

F. Maintaining the approved pesticides list as per section VIII.

G. Responding to inquiries and complaints about noncompliance with the plan.

Responses to inquiries and complaints will be in writing and kept on record with the Coordinator.

H. Ensuring the proper use and monitoring of sticky insect traps which are placed in key areas inside facilities.

I. Keeping records of pest complaints using pest logs located in District Maintenance office.

J. Developing protocols and provisions for pest avoidance and prevention during construction and renovation projects. The Coordinator will be involved in drafting specifications for all construction projects, and will have the authority to halt construction projects if protocols and provisions for pest avoidance and prevention are not being met.

V. RESPONSIBILITIES + TRAINING/EDUCATION of SCHOOL EMPLOYEES

All Silver Falls staff shall receive education on an annual basis to learn/review general IPM principles and strategies as outlined in Sections II and III and as required under ORS 634.700 (3) (i).

A. IPM Plan Coordinator

- 1. Training as outlined in section IV**
- 2. Responsibilities as outlined in section IV**

B. Custodial / Maintenance Staff

1. Training/Education

Custodial - The IPM Plan Coordinator (or a designee of the Coordinator) will provide training for custodial staff on sanitation, monitoring, inspection, and reporting, and their responsibilities as outlined below.

Maintenance - The IPM Plan Coordinator (or a designee of the Coordinator) will provide training for maintenance staff at least annually on identifying pest-conducive conditions and mechanical control methods (such as door sweeps on external doors and sealing holes under sinks), and their responsibilities as outlined below.

2. Responsibilities

- 1) Complete annual IPM training provided by the IPM Coordinator (or designee).
- 2) Deploying, monitoring, and reporting of insects found in sticky traps, as well as continually monitoring for pest-conducive conditions during daily work routines.
- 3) Sealing small holes and cracks where insects may enter when noticed if they are capable of doing so, and submitting work orders for items that they are not capable of completing.
- 4) Reporting pest problems and pest-conducive conditions that he/she cannot resolve in a short amount of time to the IPM Coordinator.
- 5) Reporting teachers to IPM Coordinator who repeatedly refuse to or need assistance to reduce clutter and other pest-conducive conditions in their classrooms.
- 6) Reporting any unapproved pesticides and their locations (such as aerosol spray cans) discovered in their regular duties or during an inspection to the IPM Coordinator.
- 7) Assisting IPM Coordinator with resolving issues found in annual inspection report.
- 8) Working with the IPM Coordinator to develop a protocol and priority list with deadlines for sealing holes, installing external door sweeps, and other pest exclusion needs which cannot be done in a short period of time.

C. Grounds Department

1. Training/Education

The IPM Coordinator (or designee) will provide grounds staff with training annually. The annual training will review this IPM Plan including all grounds department responsibilities and data from the annual report related to pesticide applications by our licensed applicators. Grounds staff will also be trained in basic monitoring for common pests on grounds.

2. Responsibilities

Grounds crews are responsible for:

- 1) Attending annual IPM training provided by the IPM Coordinator (or designee).
- 2) Working with the IPM Coordinator to continually improve IPM strategies in order to reduce conditions conducive to weeds, gophers, moles, yellow jackets, and other outdoor pests.
- 3) Keeping vegetation at least 18 inches from building surfaces, and tree branches at least 3 feet from buildings and do not allow them to hang over rooftops wherever possible.
- 4) Proper mulching in landscaped areas to reduce weeds whenever possible.
- 5) Proper fertilization, over-seeding, mowing height, edging, drainage, aeration, and irrigation scheduling in turf areas to reduce weeds.
- 6) When the decision is made to apply a pesticide, following notification, posting, record-keeping and reporting protocols in Section VII.

D. Kitchen Staff

1. Training/Education

The IPM Coordinator (or a designee of the Coordinator) will provide training to kitchen staff at least once per year on the basic principles of IPM and their responsibilities as outlined below.

2. Responsibilities

Kitchen Staff are responsible for:

- 1) Attending annual IPM training provided by the IPM Coordinator (or designee).
- 2) Assuring floor under serving counters and movable equipment is kept free of food and drink debris.
- 3) Avoiding long-term storage or use of cardboard boxes.
- 4) Removing recycle products daily.
- 5) Keeping outside doors closed at all times (except during deliveries).
- 6) Keeping all food items stored in sealed containers.
- 7) Immediately reporting any sightings of rodents or rodent droppings to the IPM Coordinator, and following up with an email to the Coordinator.

8) Reporting any pest-conducive conditions that require maintenance (e.g., leaky faucets, dumpster too near building, drains need scrubbing, build-up of floor grease requiring spray-washing, etc.) to the IPM Coordinator.

E. Faculty

1. Training/Education

The IPM Plan Coordinator (or a designee) will provide training for faculty and principals on an annual basis which covers basic principles of IPM and their responsibilities as outlined below. These short (15 – 20 minutes) training are arranged by the Coordinator with individual principals when openings in their school Faculty Meeting schedules permit. During the training, the Coordinator will review the following with Faculty:

- 1) What pest-conducive conditions are (clutter, food debris, moisture, cracks, holes, etc.), and the importance of reporting these in a timely manner.
- 2) The importance of keeping their classrooms and work areas free of clutter.
- 3) The importance of having students clean up after themselves when food or drink is consumed in the classroom.
- 4) The importance of storing all food items in sealed plastic containers.

2. Responsibilities

Faculty are responsible for:

- 1) Completing annual basic IPM training provided by the IPM Coordinator (or designee).
- 2) Keeping their classrooms and work areas free of clutter.
- 3) Making sure students clean up after themselves when food or drink is consumed in the classroom, and that all food is stored properly in sealed plastic containers.
- 4) Reporting pests and pest-conducive conditions to the IPM Coordinator by email or phone if it is an emergency.

F. School Principal

1. Training/Education

(Same training/education as Faculty)

2. Responsibilities

The School Principal is responsible for:

- 1) Scheduling time for teachers to complete annual training provided by the IPM Coordinator (or designee).
- 2) Completing annual IPM training for staff.
- 3) Assuring that teachers keep their rooms clean and free of clutter in accordance with the IPM Coordinator's instructions, and store all food items in appropriate sealed plastic containers.
- 4) Assuring that all faculty, administrators, staff, students and parents receive the annual notification (provided by the IPM Coordinator) with information regarding the school districts IPM plan, basic strategies of IPM, where to locate the district's IPM plan online, and who to contact with questions.
- 5) Working with the IPM Coordinator to make sure all notifications of pesticide applications reach all faculty, administrators, staff, students, parents and interested community members through electronic mail.

G. Other

1. Training/Education

Basic training on the principals of IPM and the main points of this IPM Plan should also be provided to school nurses, administrative staff, and the superintendent. Coaches who use athletic fields should be given an overview and updates of basic monitoring and IPM practices for turf so they understand key pest problems to look out for and when to report them.

2. Responsibilities

All other staff shall be responsible for keeping their work areas free of clutter, storing food properly, and reporting pests and pest-conducive conditions to the IPM Coordinator.

VI. IPM PROCESS

A. Monitoring – Reporting – Action Protocol

Monitoring is the most important requirement of ORS 634.700 – 634.750. It is the backbone of our IPM Program. It provides recent and accurate information to make intelligent and effective pest management decisions. It can be defined as the regular and ongoing inspection of areas where pest problems do or might occur. Information gathered from these inspections is always written down.

As much as possible, monitoring should be incorporated into the daily activities of school staff. Staff training on monitoring should include what to look for and how to record and report the information.

1. Monitoring & Reporting – All Staff

Staff will be expected to report pests or pest-conducive conditions they observe during the normal course of their daily work. Reporting will be done by e-mail, or by telephone in the event of an emergency.

2. Monitoring & Reporting – Coordinator and Custodial/Maintenance Staff

During the normal course of their daily work, the IPM Coordinator and custodial/maintenance staff will monitor structures and building perimeters for:

- 1) Pest-conducive conditions inside and outside the building (structural deterioration, holes that allow pests to enter, conditions that provide pest harborage).
- 2) The level of sanitation inside and out (waste disposal procedures, level of cleanliness inside and out, conditions that supply food and water to pests)
- 3) The amount of pest damage and the number and location of pest signs (rodent droppings, termite shelter tubes, cockroaches caught in sticky traps, etc.)
- 4) Human behaviors that affect the pests (food preparation procedures, concessions procedures, classroom food, etc.)
- 5) Their own management activities (caulking/sealing, cleaning, setting out traps, treating pests, etc.) and their effects on the pest population.
- 6) Any pests or pest-conducive conditions will be reported to the IPM Coordinator by e-mail or telephone in the case of an emergency.

3. Monitoring & Reporting – Grounds Staff

During normal daily activities, grounds staff will monitor for invasive weeds, gophers, moles, yellow jackets, and other outdoor pests. These will be reported to the IPM Coordinator by e-mail or telephone in the case of an emergency.

4. Sticky monitoring traps for insects

Sticky traps are neither a substitute for pesticides nor an alternative for reducing pest populations, but rather a diagnostic tool to aid in identifying a pest's presence, their reproductive stage, the likely direction pests are coming from, and the number of pests.

All staff will be made aware of these traps and their purpose so they don't disturb them. The IPM Coordinator and/or Custodial/maintenance staff (after proper training by Coordinator) will be responsible for setting them out and checking them once per month, and replacing them once every four months.

Sticky monitoring traps will be placed in the kitchen and any other "pest-vulnerable areas" the Coordinator deems necessary.

Kitchen sticky insect traps will be checked at least monthly (primarily for drain flies, ants, and cockroaches).

5. Monitoring for Mice

In addition to monitoring for signs of mice (droppings, gnawing, hair, etc.), snap traps will be placed in the kitchen (and any other area the IPM Coordinator deems necessary), and checked at least weekly and daily if pest populations are found to be present, by custodial maintenance staff.

6. Reporting (pests, signs of pests, and conducive conditions)

When staff observe pests or pest-conducive conditions they should notify the IPM Coordinator via email or by telephone in the event of an emergency.

7. Reporting “Pests of Concern”

“A pest of concern” is a pest determined to be a public health risk or a significant nuisance pest. These include cockroaches (disease vectors, asthma triggers), mice & rats (disease vectors, asthma triggers), yellow jackets (sting can cause anaphylactic shock), cornered nutria, raccoons, cats, dogs, opossums, skunks (they can bite), and bed bugs (significant nuisance pest).

When pests of concern (or their droppings, nests, etc.) are observed, staff should contact the IPM Plan Coordinator immediately.

8. Action

a) Structural

Any items (such as sealing up holes) that custodial/maintenance staff observe that they can resolve should be taken care of and reported to IPM Coordinator.

If the actions needed are not something that can be accomplished alone with minimal time, then custodial maintenance staff will submit a work order using the district work order system.

b) Grounds

When pests on grounds reach a threshold established by the IPM Coordinator, action will be taken as per guidelines developed by the Coordinator and Grounds Crew. The Grounds Crew or Coordinator will keep records of actions, time, and money spent to manage pests on grounds.

9. Acceptable Thresholds

A threshold is the number of pests that can be tolerated before taking action. The acceptable threshold for cockroaches, mice, rats, raccoons, cats, dogs, opossums, skunks, and nutria is 0.

Acceptable thresholds for other pests will be determined by the IPM Coordinator and the superintendent.

B. Inspections

The IPM Plan Coordinator will conduct an annual inspection using the annual IPM inspection form. During the inspection he or she will also inspect or review:

- 1) Human behaviors that affect the pests (working conditions that encourage or support pests, food preparation procedures that provide food for pests, etc.)
- 2) Management activities (caulking/sealing, cleaning, setting out traps, treating pests, etc.) and their effects on the pest population.

C. Pest Emergencies (see also Section VII. B. below)

IMPORTANT: If a pest emergency is declared, the area must be evacuated and cordoned off before taking any other steps. When the IPM Plan Coordinator, after consultation with school faculty and administration, determines that the presence of a pest or pests immediately threatens the health or safety of students, staff, faculty members or members of the public using the campus, or the structural integrity of campus facilities, he or she may declare a pest emergency. Examples include (but are not limited to) yellow jackets swarming in areas frequented by children, a nutria in an area frequented by children, a half a dozen mice or rats running through occupied areas of a school building. The Coordinator will keep records of all emergency actions taken.

VII. PESTICIDE APPLICATIONS: REQUIRED NOTIFICATION, POSTING, RECORD KEEPING, AND REPORTING

Any pesticide application (this includes weed control products, ant baits, and all professional and over-the-counter products) on school property must be made by a licensed commercial or public pesticide applicator. At the beginning of each school year, all faculty, administrators, staff, adult students and parents will receive notification about the IPM Plan, where to obtain a copy, as well as contact information for any questions or concerns pertaining to the plan. This information will be provided to all the above via e-mail as well as hard copy to parents, adult students and staff.

A. Notification and Posting for Non-emergencies

When prevention or management of pests through other measures proves to be ineffective, the use of a low-risk pesticide is permissible. Documentation of these measures is a pre-requisite to the approval of any application of a low-risk pesticide. This documentation will remain on file with the IPM Plan Coordinator.

Non-emergency pesticide applications may occur in or around a school in areas where students are not present while school is in session. If the labeling of a pesticide product specifies a reentry time, a pesticide may not be applied to an area of campus where the school expects students to be present before expiration of that reentry time. If the labeling does not specify a reentry time, a pesticide may not be applied to an area of a campus where the school expects students to be present before expiration of a reentry time that the IPM Plan Coordinator determines to be appropriate based on the times at

which students would normally be expected to be in the area, area ventilation, and whether the area will be cleaned before students are present.

The IPM Plan Coordinator (or a designee) will give written notice of all proposed pesticide applications which will be sent out to parents, staff, and interested community members via electronic mail at least 24 hours before the application will occur. Parents or community members who would like to receive these notifications can subscribe by contacting Derek McElfresh at mcelfresh_derek@silverfalls.k12.or.us

The notifications will identify the name, trademark or type of pesticide product, the EPA registration number of the product, the expected area of the application, and the expected date of application.

The licensed applicator performing the application shall place warning signs around pesticide application areas beginning no later than 24 hours before the application occurs and they are to remain in place ending no earlier than 72 hours after the application occurs.

Posted warning signs must bear the words “Warning: pesticide-treated area”, and give the expected or actual date and time for the application, the expected or actual reentry time, and provide the telephone number of the licensed applicator who is to make the application and/or the IPM Plan Coordinator.

B. Notification and Posting for Emergencies

Important Notes:

- 1) The IPM Plan Coordinator may not declare the existence of a pest emergency until after consultation with school faculty and administration.
- 2) If a pesticide is applied at a campus due to a pest emergency, the Coordinator shall review the IPM plan to determine whether modification of the plan might prevent future pest emergencies, and provide a written report of such to the Board of Directors.
- 3) The Board of Directors shall review and take formal action on any recommendations in the report.

The declaration of the existence of a pest emergency is the only time a non low-impact pesticide may be applied.

If a pest emergency is declared, the area must be evacuated and cordoned off before taking any other steps.

If a pest emergency makes it unfeasible to provide notification in advance of the pesticide application, then notice shall be given no later than 24 hours after the pesticide application occurs.

The Coordinator or designee shall post notice signs around the area as soon as possible but no later than at the time the application occurs.

Note: ORS 634.700 also allows the application of a non-low-impact pesticide “by, or at the direction or order of, a public health official”. If this occurs, every effort must be made to comply with notification and posting requirements above.

C. Record Keeping of Pesticide Applications

The IPM Plan Coordinator or designee shall keep a copy of the following pesticide product information on file at the main administration office of the school where the application occurred, and at the office of the IPM Plan Coordinator:

- A copy of the label
- A copy of the MSDS
- The brand name and USEPA registration number of the product
- The approximate amount and concentration of product applied
- The location of the application
- The pest condition that prompted the application
- The type of application and whether the application proved effective
- The pesticide applicator’s license numbers and pesticide trainee or certificate numbers of the person applying the pesticide
- The name(s) of the person(s) applying the pesticide
- The dates on which notices of the application were given
- The dates and times for the placement and removal of warning signs
- Copies of all required notices given, including the dates the IPM Plan Coordinator gave the notices

The above records must be kept on file the main administration office of the school where the application occurred, and at the office of the IPM Plan Coordinator, for at least four years following the application date.

VIII. APPROVED LIST OF LOW-IMPACT PESTICIDES

Note: All pesticides used must be used in strict accordance with label instructions.

According to ORS 634.705 (5), the governing body of a school district shall adopt a list of low-impact pesticides for use with their integrated pest management plan. The governing body may include any product on the list except products that:

- (a) Contain a pesticide product or active ingredient that has the signal words “warning” or “danger” on the label;
- (b) Contain a pesticide product classified as a human carcinogen or probable human carcinogen under the United States Environmental Protection Agency 1986 Guidelines for Carcinogen Risk Assessment; or
- (c) Contain a pesticide product classified as carcinogenic to humans or likely to be carcinogenic to humans under the United States Environmental Protection Agency 2003 Draft Final Guidelines for Carcinogen Risk Assessment.

As a part of pesticide registration under the Federal Insecticide Fungicide and Rodenticide Act (FIFRA) and re-registration required by the Food Quality Protection Act (FQPA), EPA Office of Pesticide Programs (OPP) classifies pesticide active ingredients (a.i.) with regards to their potential to cause cancer in humans. Depending on when a pesticide active ingredient was last evaluated the classification system used may differ as described above.

The National Pesticide Information Center (<http://npic.orst.edu/>) can be contacted at 1.800.858.7378 or npic@ace.orst.edu for assistance in determining a pesticide a.i. cancer classification.

In order to simplify this ever changing process, the Silver Falls School District will only utilize low impact pesticides that are listed on the OSU approved pesticide list. This is the most up to date list which is regularly updated and approved annually by the OSU IPM development team. This list is available review at: http://osu-wams-blogs-uploads.s3.amazonaws.com/blogs.dir/2946/files/Low_Impact_Pesticide_List.pdf

For any additional questions or concerns regarding the Silver Falls School District Integrated Pest management plan, please contact Lorin Stanley at: Stanley_lorin@silverfalls.k12.or.us
